

Safety At Heights For All Employees Anywhere Anytime

Working At Height

All people have a legal right to be protected from work related risks. All employers have a duty to ensure, so far as reasonably possible, the health, safety and welfare of their employees.

HSE, The Work at Height Regulations 2005 apply to all work at height where there is a risk of fall liable to cause personal injury.

These regulations have been made to prevent deaths and injuries caused each year by falls at work.

In 2004/05 falls from height accounted for 53 fatal accidents at work and nearly 3800 major injuries. They remain the single biggest cause of workplace deaths and one of the main causes of major injury.

Don't think you have to fall from a great height to be hurt, 7 deaths and 2247 major injuries were from a fall below head height!

As an employer you have a duty to ensure that work at height is properly planned, those involved in work at height are trained and competent and the equipment for work at height is appropriately inspected.

Fire Safe International Work at Height Training Course includes use of fall protection equipment, equipment maintenance & work at height regulations.

Provides staff with hands-on experience of the practical skills necessary to carry out a work at height risk assessment

Discusses safe use of harness, ladders & scaffolds including practical demonstrations and group activities.

Fire Safe International Working At Height Training is essential for all those responsible for working at heights.

The course is designed for employees, the self-employed and anyone else who works at height. It tells you what you need to do to comply with the Work at Height Regulations 2005 and ensures safe working practices are in place when working at height.

Please contact us for further details, or to discuss your specific training needs.
